LEON BYTYQI

RESEARCH INTERNSHIP 2027 • DATA SCIENCE / MACHINE LEARNING

Portfolio: github.com/JLFoxii | MSc Data Science • Universite Claude Bernard Lyon 1

PROFILE

Final-year MSc Data Science student with Python research experience in geospatial and sensor time-series analysis. Interested in robust non-generative Machine Learning, computer vision, anomaly detection, reproducible experiments and model evaluation. Seeking a full-time six-month research internship in 2027.

EDUCATION

MSc Data Science — Universite Claude Bernard Lyon 1

2026–2027 | Machine Learning, Data Mining, statistics, data integration, graph analytics

M1 Computer Science (2025–2026) and BSc Computer Science (2021–2025) — same university

RESEARCH EXPERIENCE

Research Intern — LIRIS, Imagine research team

May–July 2025 | Developed Python preprocessing tools for multiband GeoTIFF and geospatial time-series datasets; handled missing values, temporal extraction, spatial cropping and aggregation.

Prepared DFTS-P2MINER parameters, post-processed outputs and created scientific visualisations and geospatial exports (NumPy, GDAL, Matplotlib).

SELECTED DATA PROJECTS

RailGuard AI — predictive maintenance & anomaly detection (ongoing, 2026)

Exploring MetroPT-3 industrial compressor sensor data (~1.5M observations), timestamp irregularities, sensor features, anomaly detection and cost-sensitive evaluation. Training/validation still in progress.

League of Legends ranked matches — Data Mining (ongoing, 2026)

Academic Python project examining ranked-match patterns, data exploration and graph-analysis methods; reproducible notebooks under development.

SKILLS AND METHODS

Python (pandas, NumPy, scikit-learn coursework) • SQL / PostgreSQL • C/C++

Statistics, feature engineering, data quality, anomaly detection, evaluation metrics, scientific plots

Jupyter, Matplotlib, GDAL, Git, Linux, Docker, pytest • reproducible experiments

ENGINEERING BACKGROUND

Spot — booking marketplace (2026): Next.js/TypeScript, backend APIs, PostgreSQL and deployment. Also experienced with Git-based collaboration and modular software development.
